

Moving Bibic Winery to the new app: what came across and what didn't

Prepared from the copy of your live data taken on 3 October 2026. This is the plain-language version of the technical report (document 18), which is kept for reference.

The short version

Everything that runs your day-to-day business has been copied into the new app, and it **matches the old system to the cent**: your customers, products and stock, orders, suppliers, costs, money received, the cellar and the vineyards.

To avoid dropping anything meaningful, we also added four things to the new app: customer categories (Restaurant, Hotel and so on), a "Cancelled" status for work orders, VAT on money-received entries, and room for longer cost descriptions.

What was **not** copied are the areas the new app doesn't cover yet: the till sales records, hospitality and reservations, staff scheduling, the kitchen, the wine club, the sales pipeline, bank statement lines and e-invoice files. Nothing has been deleted from the old system, so all of that is still there if you need it.

Two things need a decision or action from you before the team relies on the new app, and who can do what now matches the old app. They are explained in "What needs your attention" at the end:

1. **Several staff roles do work that is not in the new app yet**, so a few people will find little to do there for now.
2. **Costs and money received** have no screens in the new app yet, so that day-to-day work still happens in the old system.

What was copied

Area	What came across	Notes
Staff	9 of 11 accounts	Everyone keeps their existing password. The 2 left out were test accounts.
Products	131 of 132 products, with their stock levels and all 105 product photos	The one left out was a sample product that had never been sold. Stock quantities match the old system exactly. The photos have been copied across and checked.
Recipes	183 recipe lines (what goes into each product)	
Customers	All 155	Including their own prices (19), which products each customer can see (28 settings), and the personal ordering links used by 7 customers. Those links still work.

Area	What came across	Notes
Customer categories	All 7 categories (Restaurant, Distributor / Importer, Retailer / Shop, Wine bar / Enoteca, Hotel, Private customer, Other), in your order, and the category of each of the 32 customers who had one	The new app now has customer categories of its own: you can add, rename, reorder and retire them, give each customer one, and filter the customer list by category.
Suppliers	All 243, with 1,390 price-list entries	
Orders	All 353 orders, worth €819,960.02	With all 2,010 order lines, 1,124 status changes, 289 notes and 13 consignment reports. Your existing order numbers are kept as they were. New orders will start again at ORD-00001.
Stock history	2,811 stock movements	
Costs	All 1,011 costs, totalling €600,373.78	Including VAT of €70,546.28 and 4,047 itemised lines. Long descriptions are kept in full.
Money received	584 entries, totalling €782,139.25 , with the VAT on them (€125,619.10 across 480 entries)	Customers still owe you €612,673.28 . The 28 entries that were left out are explained below. VAT works as in the old app: the amount includes VAT, and the net figure is the amount minus VAT. The 685 costs and 521 money-received entries that were invoices in the old app are marked as invoices, so the invoice and VAT summaries add up the same way.
Cellar	218 vessels (231,320 litres of capacity), 51 wine lots, 497 lab analyses, 283 additions, 45 transfers between lots, tasting notes, cellar products and fermentation templates	
Work and planning	All 91 work orders (including 1 that was cancelled), 2 boards, 3 production plans	The new app now has a "Cancelled" status for work orders.
Vineyards	20 parcels (12.94 hectares), 33 grape contracts, growth-stage logs, crop estimates, treatments and an intake booking	

In total, **16,007 of 16,048** records that have a home in the new app were copied. The 41 that weren't are listed under "Left out on purpose" below.

How we know it is correct

After copying, we ran **76 separate comparisons** between the old system and the new one: record counts and money totals for every area. **All 76 match, with no differences.** The headline figures above (order value, costs, money received, amount owed) are taken from those comparisons.

Copying the data again would not create duplicates or change anything. It was also tried first as a rehearsal that changed nothing, before the real run.

What was NOT copied, and why

For most of this list the reason is simple: **the new app doesn't have that area yet**, so there was nowhere to put the data. The old records are untouched.

What	How much	Why it wasn't copied	What it means for you
Till (cash register) sales	About 19,400 receipts, 72,000 receipt lines and the payments and article list that go with them	The new app has no till connection yet	Historical till sales can't be seen in the new app
Hospitality and reservations	769 reservations and their history, 10 programmes with 362 agency prices, 2 villas with their bookings, rates and menus	Not built in the new app yet	Reservations must still be handled in the old system
Itemised lines on money-received entries	1,181 lines	The new app keeps one amount per entry, not a breakdown	Totals are all there. The line-by-line detail of what each customer invoice contained is not
Bank statement lines	545	No place for them yet	Costs and money received are copied, but they are no longer linked to the bank statement line they were matched with
E-invoices (Moj-eRačun)	1,265 files	No place for them yet	The costs and money received that came from them are copied, but not the e-invoice files themselves
Staff records and scheduling	22 employees, 1,661 daily logs, 136 schedule entries	Not built yet	
Kitchen	About 95 records	Not built yet	
Wine club	About 18 records	Not built yet	
Sales pipeline	About 50 records (contacts, deals, notes, projects)	Not built yet	
Customer surveys	21 records	Not built yet	
Cash-flow planner	About 20 records	Not built yet	
Planning worksheets	About 55 records (harvest planning, the final production plan) and 14 planned cellar activities	Not built yet	
Product group ordering	34	The new app has no setting for the order product groups appear in	The inventory list shows groups in the order the products sort. Nothing is lost but the layout may look different

What	How much	Why it wasn't copied	What it means for you
Board columns	6	Every board in the new app uses the same three columns: To do, In progress, Done	Three tasks that sat in the Private board's "Parking" column now show under To do or Done according to their status
Notifications and phone alert sign-ups	2,064 and 10	Temporary by nature. Phone alerts are tied to the old website address	Staff turn phone alerts on again in the new app
Translation overrides	16	In the new app these are shared across the whole platform and managed by the platform administrators	Nothing for you to do

Left out on purpose, or changed

These are the records that *could* have been copied but were deliberately handled differently. Each one was checked.

What	What we did	Why
2 test staff accounts	Not copied	They were test accounts, not real people.
1 sample product ("Premium Red Blend")	Not copied	It was demo data that had never been ordered.
28 money-received entries	Not copied	These are 14 invoices that were cancelled, plus the 14 cancellation notes that cancelled them. They add up to zero. Copying only the invoices would have overstated what customers owe you.
9 supplier price-list entries	Merged into the newer entry	They were the same item entered twice, differing only by a trailing space.
123 customers with no customer type	Sorted into a type automatically	84 are agencies (as marked in the old system), the rest were treated as wholesale. You can correct any of them. The "type" is the sales channel behind the dashboard's revenue split. It is separate from the category (Restaurant, Hotel, ...), which was kept as written.
1 customer with no email address	Given a placeholder address	The new app needs one. Please enter the real address for Restavracija Hotela Marina - Izola .
147 order lines sold as "units"	Recorded as bottles	The new app only knows bottles and cases.
6 crop estimates	Copied with the yield only	The old estimates only recorded the final yield, not the sample counts behind it.
181 old stock movements	Kept as history	They refer to orders that no longer exist.

What needs your attention

1. Who can do what now matches the old app

Each person kept their roles, and each role now allows what it allowed in the old app. Here is what that means for your team:

Person	Roles	Can do in the new app
Filip, Karla	Administrator	Everything
Dragan	Cellar, Orders, Inventory	Orders, create customers, view inventory and record stock movements, the cellar and vineyards, work orders, see money figures
Ramon	Cellar, Orders	Orders, create customers, the cellar and vineyards, work orders, see money figures
Bojan	Manager, Employee, Orders	Orders, create customers, see money figures. No work orders (see below)
Slavica	Orders, Hospitality, Inventory	Orders, create customers, view inventory and record stock movements, work orders, see money figures
Nikola	Sales, Employee	See money figures only (the sales pipeline is not in the new app yet)
Vesna	Manager	See money figures only
Dražen	Hospitality	Nothing beyond the dashboard (hospitality is not in the new app yet)

A few things worth knowing, all copied from how the old app behaved:

- **Only administrators** handle costs, money received, cash flow, suppliers, purchase-order changes, prices, customer editing, settings and the team list.
- **Creating and editing products** is for the Team role only. Inventory staff can see products and record stock movements, but not create or edit them.
- **Work orders** are for Team, Cellar and Orders. Anyone who also holds the Manager role never sees them, even if they hold Orders as well. That is why Bojan has none. Administrators always see everything.
- **Customers:** the customer list and customer pages are for administrators. Team and Orders staff can create customers and use the reorder reminders.

Four judgement calls, where the old app was not entirely consistent:

1. In the old app, some behind-the-scenes functions would have let any signed-in person read the customer list, even though the menu only showed it to administrators. We followed what people actually saw: menu and pages.
2. The old app let Sales staff add a customer from inside an order form. Sales can't create orders, so we left that out.
3. The new AI data entry feature has no equivalent in the old app. Because it creates costs, money received entries and suppliers, which only administrators could handle, we made it administrator-only too.
4. Cellar costs are money figures, and were administrator-only in the old app, so they are here too.

This also means the new app can no longer be used by Manager, Sales, Hospitality, Kitchen, Employee or Wine Club roles for much, until the areas those roles worked in (people management, the sales pipeline, hospitality, the kitchen, the wine club) are built.

2. Costs and money received have no screen yet

The records are all in the new app, but the pages for browsing and entering costs and money received are not built yet (they appear in the menu as placeholders). Until they are, staff can't add or review these from the new app's screens, so the old system is still where that daily work happens.

One VAT difference to know about: the old app filled in VAT by itself, by reading e-invoices and by scanning customer invoices. The new app does not do that yet, so for new entries VAT has to be typed in.

3. Staff who need the missing areas

Two people mainly use areas that aren't in the new app yet:

- **Dražen** (reservations) has almost nothing to do in the new app until hospitality is built.
- **Nikola** (sales) can only see financial figures until the sales pipeline is built.

Slavica also has a hospitality role that has no effect yet.

4. A few things to tidy up or double-check

- **1 customer** (Restavracija Hotela Marina - Izola) needs a real email address (see above).
- **8 products** have a stock count that isn't explained by the recorded stock movements. This is normal when stock was counted at the start, but please spot-check them.
- **2 vessels** (ST23 and S01) show more wine than their capacity. That is how the old system had them, so it may just be a data-entry error to correct.
- **1 vessel and 9 wine lots** have a recorded volume that doesn't match what is inside them. Please check these in the cellar, as some may simply be emptied or bottled lots.

5. Try it with real work

The numbers all match, but we have not yet had someone walk through the screens with the imported data. We suggest a short session with the team using real orders and the cellar before relying on it.

6. Keep the old system for now

We recommend keeping the old system available (read-only) until the missing areas have been built and you are happy with the new app. It holds the till sales, reservations and staff records that were not copied.
